Additional Patient Information

One of the overarching goals of the whole effort of digitize medication records in this country is to be able to reduce health care disparities between different populations. Historically, health care has been shown to disadvantage certain populations based of race, ethnicity and language.

In order to carry out outcomes research and other observations of health data, being able to distinguish the experience of patients based on race, ethnicity and language is important. Building a database that can drive public health policy, or other disease and treatment research, is a vitally important long-term vision for digitized health data. Including race, ethnicity, and language in this data set is an important foundational element.

Please circle the appropriate line:

1. **Race (OPTIONAL):** White, Hispanic, Asian, Black/African American, Hispanic, American Indian, Alaska Native, Other: _____
2. **Ethnicity: (OPTIONAL):** Hispanic/Latino, Not Hispanic
3. **Language (OPTIONAL):** English, Spanish, Indian, Italian, Other: _____
